

Single C-Class™ Commercial HVLS Fan Replaces Multiple Ceiling and Floor Fans at Anytime Fitness

APPLICATION: ANYTIME FITNESS

ENVIRONMENT: PERSONAL FITNESS GYM

CHALLENGE:

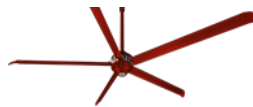

Improve overall air circulation rather than relying on multiple ineffective residential ceiling fans and disruptive floor fans.

SOLUTION:

A single 8-foot diameter Entrematic C-Class™ commercial HVLS fan that provides slow moving, efficient and low-energy cost air circulation.

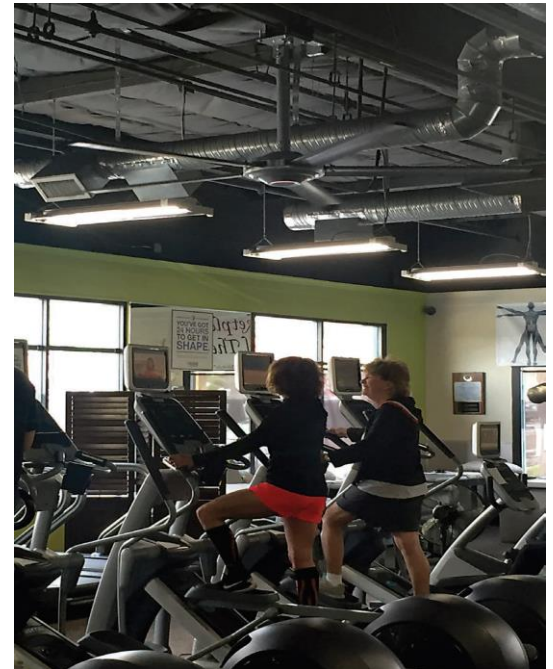

RESULTS:

Complete with an easy-to-operate wireless remote, airflow is constant and consistent emanating from the center of the fitness club keeping members cool and comfortable.

The Entrematic HVLS C-Class fan has replaced three high-speed residential fans, as well as multiple floor fans. This C-Class features sleek Stardust Silver color (customer colors available). Stardust Silver provides a clean look and an energizing feel, especially while the fan is rotating. The fan is in constant operation seven days a week, 365 days a year. By no longer running the residential and floor fans and running one C-Class HVLS fan means less energy cost.

The Entrematic C-Class commercial HVLS fan is designed for power at any speed, which means that users don't necessarily need to run a fan at its maximum 250-watt capacity. This fan is designed for impact at half that rate, so a 4-7 degree temperature change will be felt at just 40% wattage use (for a speed setting of 4-5). With every degree change, users are projected to experience up to a 3% savings on their energy bill.
